

DPEC™ by SIOUX **PATENT PENDING**

FOR INSTANTLY CLEANING DRILL PIPE DURING REMOVAL FROM THE WELL

CONSIDER THESE BENEFITS:

- *Avoid costly EPA fines.*
- *Clean drill pipe, cables, and downhole tools instantly and effectively as they are removed from the well.*
- *Eliminate the additional time, labor and expense to transport the pipe to other locations for cleaning.*
- *Pipe can be inspected on-site because contaminants have been removed.*
- *Eliminate spills and soil contamination from mud and oil on the outside of the pipe - all the mud and oil fall back into the well.*
- *Safe handling of clean pipe as opposed to pipe covered in drilling mud.*

DPEC™ Package
(includes steam collar and trailer system)

DPEC™ by SIOUX

PATENT PENDING

HOW IT WORKS...

Sioux's patent pending cleaning process utilizes a self-contained trailer package to provide steam to the steam collar. This unit produces 320°F (160°C) steam at 250 PSI (17.2 BAR) for optimum cleaning power. The collar is mounted in-line above the blow-out preventer (BOP) between two flanges. As the pipe is extracted from the well, it passes through the collar,

where it is instantly cleaned, and all residue and contaminants fall back into the well. By doing so, you avoid hauling the contaminated items off-site for cleaning. Sioux also supplies 100% all-electric explosion-proof steam cleaners for DPEC™ use in hazardous locations.

Collars are available in various sizes for placement between your API flanges. Material options include stainless steel and anodized carbon steel. Consult a Sioux representative to determine which options you need for your specific application.

Sioux is the industry leader in application-specific cleaning equipment.
