Engine-Driven Hot Water Washers

Model H5D3000-G

Model H5D3000-D

OVERVIEW

Sioux Corporation's engine-driven hot pressure washers are great for cleaning dirt, grime, and mud. These self-contained units are ideal for cleaning equipment or for general maintenance. Engine-driven units require no external power source,

making them a great choice for cleaning equipment at remote sites, such as in construction and mining operations. They can also be used for cleaning in many other applications such as on-shore petroleum rigs and for grounds and facilities maintenance.

STANDARD MODELS (other models and options available)
